

PYKV: A Scalable In-Memory Key-Value Store with Persistence

Milestone 2

- **ABSTRACT**

This phase enhances the system by adding caching using LRU policy and improving data handling with structured models.

- **WORK DONE**

Implemented LRU cache using dictionary and doubly linked list. Integrated cache with store. Added Pydantic models for request validation.

- **PROBLEMS FACED**

Difficulty in implementing LRU logic. Solved by understanding linked list operations.

- **OUTPUT SCREENSHOT**

- CONCLUSION

System now efficiently manages memory using LRU eviction.
